Senior Network & Systems Administrator | LINX

Cover letter

Hi LINX team,

I’m interested in taking care of the infrastructure behind a company that installs and supports it for others. The part of your posting that stood out was the expectation that the last escalation should lead to fewer repeat calls, not just a workaround. That’s the kind of work I’ve done both at a datacenter and in the field with clients.

At Front Range Internet, the NOC escalated the issues it couldn’t resolve to me. I built diagnostic tools the team could reuse, moved workloads off VMware ESXi and Hyper-V into containers, and turned our operating procedures and recovery checks into evidence we could use in audits. I also kept aging hardware running when replacing it wasn’t an option. That taught me to separate the immediate fix from the work that keeps the same problem from coming back.

Through Technomancy IT, I’ve modernized client servers and networks, helped open a satellite office, and set up Windows Server, Active Directory and VPN access so the people there could use what they needed. I’ve also worked across client Microsoft 365 and Azure environments. I’d like to bring that mix of hands-on systems work, escalation judgment and follow-through to the corporate IT team at LINX.

Thanks,
Chad Koslovsky
